CERTIFICATE

Dailymotion Website” submitted by Monika Chauhan (UID: 25MCI10067) of MCA – Artificial Intelligence & Machine Learning, University Institute of Computing (UIC), Chandigarh University, has been carried out under my supervision and guidance.

The project is submitted in partial fulfilment of the requirements for the award of the degree of Master of Computer Applications during the academic session Jan 2026 – May 2026.

The work is original and has not been submitted elsewhere for any degree or diploma. It focuses on applying Unit Testing techniques to verify individual functionalities and Usability Testing to evaluate user experience, interface design, and ease of navigation on the Dailymotion website.

Punjab

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to Chandigarh University and the University Institute of Computing (UIC) for providing me the opportunity to undertake this project, “Unit Testing and Usability Testing on Dailymotion Website.”

I am thankful to my mentor, Ms. Pardeep Kaur, for her valuable guidance, continuous support, and encouragement throughout the project.

I also extend my thanks to my friends and family for their constant motivation and support. This project has been a great learning experience in the field of Software Testing, particularly in understanding Unit Testing and Usability Testing techniques.

Monika Chauhan

INTRODUCTION

Dailymotion is a popular video streaming platform that offers users access to entertainment, news, and personalized content. With a growing user base, it is important to ensure the platform runs efficiently, reliably, and is easy to use. Even small issues like login errors, slow playback, or poor navigation can affect the user experience.

Software testing helps maintain the quality of such applications by identifying defects and ensuring the system meets both technical and user requirements. This project focuses on Unit Testing and Usability Testing. Unit Testing checks individual components like login, search, and video playback to ensure they function correctly. Usability Testing evaluates how user-friendly and intuitive the platform is.

The main objective is to verify core functionalities and improve the overall reliability and user experience of the Dailymotion website.

OBJECTIVES

The main objectives of this project are as follows:

1. To perform Unit Testing:

To ensure that each individual function or module of the Dailymotion website (such as login, search, and video playback) is tested independently and works correctly.

2. To conduct Usability Testing:

To evaluate whether the website is user-friendly, easy to navigate, and provides a smooth user experience.

3. To analyze system functionality:

To understand and verify how different features of the Dailymotion website perform under various conditions.

4. To identify and report defects:

To detect functional errors or usability issues and document them for further improvement.

5. To verify core functionalities:

To ensure that key features such as login, video streaming, search, and user interactions work properly.

6. To evaluate user interface and navigation:

To check that the design, layout, and navigation of the website are clear, consistent, and easy to use.

7. To improve system reliability and user satisfaction

To ensure the platform performs efficiently and provides a seamless experience to users.

8. To gain practical knowledge of Software Testing

To understand the real-world implementation of Unit Testing and Usability Testing techniques in web-based applications.

LITERATURE REVIEW

◆ Unit Testing

Unit Testing is a software testing technique used to test individual components or functions of a program. It ensures that each unit of the application works correctly in isolation and helps in detecting functional errors at an early stage.

◆ Function-Level Testing (Unit Coverage)

In Unit Testing, each function or module is executed with different inputs to ensure correct output. It helps in identifying errors within specific parts of the program and ensures that all important functionalities are tested.

◆ Usability Testing

Usability Testing focuses on evaluating how easy and user-friendly an application is. It ensures that users can interact with the system efficiently, understand the interface, and complete tasks without confusion.

◆ Testing in Video Streaming Platforms

Applications like Dailymotion require proper testing to handle video playback, user interactions, and large traffic efficiently. Testing ensures smooth streaming, fast loading, and a seamless user experience.

◆ Existing Technologies and Practices

Modern software testing uses both manual and automated approaches. Tools like Selenium, JUnit, and TestNG are commonly used for efficient testing and validation of applications.

◆ Importance of Unit and Usability Testing

- Ensures correct functionality of individual components
- Detects errors at an early stage
- Improves user experience and interface design
- Enhances overall system reliability and performance

SYSTEM REQUIREMENTS

Functional Requirements

1. User registration and login (Email/Password)
2. Secure authentication of user credentials
3. Search and display videos, channels, and categories
4. Video playback (play, pause, seek, volume control)
5. Like/Unlike videos
6. Comment on videos
7. Share videos
8. Video loading and buffering functionality
9. Logout functionality
10. Error handling for invalid inputs

Non-Functional Requirements

1. Performance: Fast loading and smooth video playback
2. Usability: Simple and user-friendly interface
3. Security: Secure handling of user data and login credentials
4. Reliability: No crashes during login or video playback
5. Scalability: Ability to handle a large number of users
6. Compatibility: Works across different devices and browsers

Software Requirements

- OS: Windows / Android / iOS
- Browser: Chrome, Edge
- Tools: Browser, Excel

Hardware Requirements

- 4 GB RAM
- 1.5 GHz Processor
- Internet Connection
- Laptop / Mobile

Test Plan – Unit Testing (IEEE 829 FORMATE)

Section	Section Title	Details
1	Purpose	To test individual modules (login, search, video player, etc.) to ensure each function works correctly
2	Scope	Login, Signup, Search, Video Player, Like, Comment, and Share features
3	Objectives	Detect bugs early, verify functionality, improve code reliability
4	Test Items	Login module, Signup module, Search module, Video player module
5	Features to be Tested	Input validation, output correctness, error handling, button functionality
6	Features NOT to be Tested	User Interface design, performance testing
7	Test Approach	White Box Testing approach, testing each function individually using valid and invalid inputs
8	Test Environment	Windows OS, Chrome browser, stable internet connection
9	Entry Criteria	Modules are developed and website is accessible
10	Exit Criteria	All unit test cases executed and critical bugs fixed
11	Roles & Responsibilities	Tester: Execute test cases, Developer: Fix bugs
12	Schedule	Test Design: 1 day, Execution: 2 days, Reporting: 1 day
13	Risks	Module failure, network issues
14	Mitigation	Use stable internet and proper setup

Test Case – Unit Testing

TC ID	Test Case	Input	Expected Output	Result
UT01	Login with valid data	Correct email/password	Login successful	Pass/Fail
UT02	Login with invalid password	Wrong password	Error message	Pass/Fail
UT03	Search video	Keyword "music"	Relevant videos displayed	Pass/Fail
UT04	Play video	Click video	Video starts playing	Pass/Fail
UT05	Pause video	Click pause	Video pauses	Pass/Fail
UT06	Like video	Click like button	Like count increases	Pass/Fail
UT07	Comment on video	Enter comment	Comment posted	Pass/Fail
UT08	Share video	Click share	Share options shown	Pass/Fail
UT09	Logout	Click logout	User logged out	Pass/Fail
UT10	Signup	Enter new details	Account created	Pass/Fail

Test Case – Usability Testing (IEEE 829 FORMATE)

Section	Section Title	Details
1	Purpose	To evaluate whether the website is user-friendly and easy to use
2	Scope	UI design, navigation, accessibility, and user interaction
3	Objectives	Improve user experience, ensure easy navigation, increase user satisfaction
4	Test Items	Homepage, navigation menu, video player interface, login and signup forms
5	Features to be Tested	Ease of use, layout clarity, responsiveness, readability
6	Features NOT to be Tested	Backend logic and performance testing
7	Test Approach	Real-user testing, observation, and feedback-based evaluation
8	Test Environment	Mobile and Laptop devices, Chrome browser, internet connection
9	Entry Criteria	Website is live and accessible
10	Exit Criteria	Feedback collected and usability issues identified
11	Roles & Responsibilities	Users/Testers: Provide feedback, Analyst: Evaluate results
12	Schedule	Testing: 2 days, Feedback Analysis: 1 day
13	Risks	Subjective feedback from users
14	Mitigation	Use multiple users for testing

Test Case - Usability Testing

TC ID	Test Case	Scenario	Expected Result	Result
UTY01	Homepage clarity	Open homepage	Clean & understandable UI	Pass/Fail
UTY02	Navigation ease	Browse categories	Easy navigation	Pass/Fail
UTY03	Search usability	Search video	Easy & fast search	Pass/Fail
UTY04	Video player controls	Play video	Controls visible & easy	Pass/Fail
UTY05	Mobile responsiveness	Open on phone	UI adjusts properly	Pass/Fail
UTY06	Signup process	Create account	Simple & quick process	Pass/Fail
UTY07	Error messages	Wrong login	Clear error shown	Pass/Fail
UTY08	Loading speed	Open video	Fast loading	Pass/Fail
UTY09	Accessibility	Font & buttons	Readable & clickable	Pass/Fail
UTY10	Overall experience	Use website	Smooth experience	Pass/Fail

JIRA IMPLEMENTATION

Step 1: Create Epic

1. Go to **Epics** panel
2. Click + **Create Epic**
3. Fill details:
 - **Epic Name:** User Authentication Testing
 - **Summary:** Authentication Module
 - **Description:** Testing login, signup, logout features
4. Click **Create**

Step 2: Create Story

1. Click + **Create**
2. Select **Issue Type: Story**
3. Fill:
 - **Summary:** User Login
 - **Description:** User should be able to login with valid credentials
 - **Epic Link:** Select your Epic
4. Click **Create**

Step 3: Create Task

1. Click + **Create**
2. Select **Issue Type: Task**
3. Fill:
 - **Summary:** Perform Unit Testing
 - **Description:** Execute test cases for login, search, video
 - **Epic Link:** Select Epic
4. Click **Create**

Step 4: Create Test Case (as Task)

1. Click + **Create**
2. Select **Task**
3. Fill:
 - **Summary:** UT01 – Login with valid data
 - **Description:** Steps + Expected Result
4. Click **Create**

Step 5: Create Bug

1. Click + **Create**
2. Select **Issue Type: Bug**
3. Fill:
 - **Summary:** Login not working
 - **Description:** Error occurs with valid input
 - **Priority:** High
4. Click **Create**

Priority breakdown

Types of work

RESULT AND VISUALIZATION

- **Accurate Functionality Verification**

The system correctly performs core features such as login, search, video playback, and user interactions with expected results.

- **Proper Execution of Individual Modules**

All important functions are tested independently through Unit Testing, ensuring each module works correctly.

- **Improved Usability and User Experience**

The website provides a simple, clear, and user-friendly interface with easy navigation.

- **Effective Error Handling**

Appropriate error messages are displayed for invalid inputs like wrong credentials or empty fields.

- **System Reliability**

The application works consistently without crashes and handles different scenarios efficiently.
